Performance Profiles

Operating Performance

The REIT's recent 12-month average return on assets exceeds yields on 10-year Treasuries, indicating potential for positive risk-adjusted returns. At its current cost of debt and level of borrowing, its use of debt is contributing to increased returns for shareholders.

Financing Outlook

Interest coverage ratio exceeds the 2.0X benchmark and the REIT does not have over 20% of debt maturing within 2 years or at unhedged variable rates. The REIT does not face an immediate need to refinance a significant portion of its debt, and has sufficient earnings to cover interest expense.

Cumulative MFFO Payout

The REIT has not achieved a level of MFFO in excess of cash distributions since inception and the latest 12-month results indicate cash distributions exceed MFFO, a trend which must be eventually reversed for distribution sustainability.

Summary

The REIT's return on assets for the last four quarters was 7.50%, well above the yield on 10-Year Treasuries of 2.64%, and it had a positive leverage contribution due to its 5.78% average cost of debt and 61.5% debt ratio. Only 3.2% of the REIT's debt matures within two years and none is at unhedged variable rates, indicating no refinancing need and minimal interest rate risk. Its interest coverage ratio for the last four quarters at 2.0X is just at the 2.0X benchmark. Since inception the REIT has paid out 165% of MFFO in cash distributions excluding DRP proceeds, and this rate was 160% for the last four quarters, which is not a sustainable cash distribution payout rate.
