Performance Profiles

Operating Performance

The REIT's recent 12-month average return on assets is less than yields on 10-year Treasuries, indicating negative risk adjusted returns. At its current cost of debt and level of borrowing, the use of debt is not increasing returns to shareholders. Earnings must improve to cover costs of debt.

Financing Outlook

More than 20% of REIT's debt must be repaid within two years or is at unhedged variable rates, and interest coverage is below the 2.0X benchmark. The REIT may face difficulties in refinancing its borrowings, interest rate risks from increasing rates, and need to increase earnings to reassure lenders.

Cumulative MFFO Payout

This REIT is not currently paying cash distributions to common shareholders and cumulative MFFO since inception is currently negative. MFFO payout ratios are not applicable.

Summary

The REIT's 12-month return on assets was -1.46% which obviously could not provide shareholders with positive returns, and its leverage contribution was significantly negative, given the 43.6% debt ratio and 6.50% estimated average cost of debt. The REIT's interest coverage ratio is an extremely low 0.5X, 35.4% of the REIT's debt matures within two years and 23% is at variable rates, indicating a potentially serious problem with refinancing. The REIT does not have a meaningful cumulative MFFO payout ratio or 12-month MFFO payout ratio because both cumulative MFFO and 12-month MFFO are negative and no cash distributions have been paid since 2011.
