NOTES: Effective as of May 17, 2010, the board of directors established an estimated per share value of \$4.25 per share. In accordance with the DRP, future distributions may be reinvested in shares of common stock at a price of \$4.25 per share. The fixed rate debt of \$2.8 billion noted above includes \$150.0 million in revolving loans which bear interest at a variable rate, but which are effectively fixed through the use of interest rate swap agreements. In 2009, the board determined to (1) suspend until further notice redemptions other than exceptional redemptions and (2) set a funding limit of \$10.0 million for exceptional redemptions considered during 2010 proportional to each redemption period. On May 17, 2010, the board of directors elected to adjust the 2010 funding limit for exceptional redemptions for each of the remaining two redemption periods of 2010 to approximately \$1.1 million. The Distribution Coverage Ratio is listed as "Not Meaningful" when Funds from Operations (FFO) or Modified Funds from Operations (MFFO) during that period are negative. A negative FFO or MFFO indicates a loss – no accounting earnings to cover the distribution. Keep in mind, however, that FFO or MFFO does not indicate when cash actually changed hands. FFO or MFFO is an accrual or accounting measure of profitability that records revenues and expenses when they are incurred – regardless of when cash is exchanged.
