Performance Profiles

Operating Performance

The REIT's recent 12-month average return on assets exceeds yields on 10-year Treasuries, indicating potential for positive risk-adjusted returns. At its current cost of debt and level of borrowing, its use of debt is contributing to increased returns for shareholders.

Financing Outlook

More than 20% of REIT's debt must be repaid within two years or is at unhedged variable rates, and interest coverage is below the 2.0X benchmark. The REIT may face difficulties in refinancing its borrowings, interest rate risks from increasing rates, and need to increase earnings to reassure lenders.

Cumulative MFFO Payout

The REIT has not achieved a level of MFFO in excess of cash distributions since inception and the latest 12-month results indicate cash distributions exceed MFFO, a trend which must be eventually reversed for distribution sustainability.

Summary

The REIT's return on assets for the last four quarters was 7.05%, well above the yield on 10-year Treasuries, and it had a positive leverage contribution due to its 5.78% average cost of debt and 59.7% debt ratio. About 58% of the REIT's debt matures within two years and none is at unhedged variable rates, indicating significant refinancing needed but minimal interest rate risk. Its interest coverage ratio for the last four quarters at 1.9X is just below the 2.0X benchmark. Since inception the REIT has paid out 161% of MFFO in cash distributions excluding DRP proceeds, and this rate was 163% for the last four quarters, which is not a sustainable cash distribution payout rate.
